Professional Summary

Having versatile experience of working on complex projects proceeding to successful deliveries by using tools and services, Jenkins, Ansible server, AWS infrastructure, Microsoft Azure, Azure Kubernetes services, Nginx, Cloudflare, Grafana, ELK stack, Tomcat 9.0, Python, YAML files, Azure Active Directory, CHEF configuration management, SQL Server, Proxy Services, Docker, Kubectl, SAP Administration, Microsoft Windows Servers, Domain Controller, DNS mapping, Palo Alto firewalls, Red Hat Ubuntu Administration, Bitbucket, Jira, Autotask, GitHub, Design highly available infrastructure using best Kubernetes services & security practices, supporting Dev, Info-Sec & QA teams to adopt DevOps & automating SDLC processes. I've spearheaded the seamless migration of on-premises data centers to the cloud, skillfully optimizing existing infrastructure to curtail cloud costs. Proficient in both AWS and Azure, I've orchestrated infrastructure management fortified by top-tier security practices. My automation prowess shines through Python scripts, seamlessly replacing manual operations, thus amplifying efficiency and precision.

Projects

- Experienced IT professional adept in Active Directory and Group Policy management on Windows Server environments. Proficient in configuring and optimizing network infrastructure, ensuring seamless integration between Windows and Ubuntu systems.
- Designed and implemented automated CI/CD pipelines using Jenkins and Ansible, resulting in accelerated software delivery cycles and enhanced code quality. Utilized Infrastructure as Code (IaC) principles to provision and configure AWS and Azure resources for different environments, ensuring consistency and scalability.
- Led the migration of on-premises applications to AWS infrastructure, optimizing resource utilization and improving application performance. Implemented Azure Kubernetes Service (AKS) to orchestrate containerized applications, enabling seamless scaling and efficient resource management.
- Architected a secure web application infrastructure by deploying Nginx reverse proxy and integrating Cloudflare for DDoS protection and enhanced security. Implemented Web Application Firewall (WAF) rules to mitigate security threats and ensure robust application security.
- Implemented the ELK (Elasticsearch, Logstash, Kibana) stack to centralize and visualize logs, enabling efficient troubleshooting and proactive monitoring. Integrated Grafana dashboards for real-time visibility into application and infrastructure metrics, leading to prompt issue detection and resolution.
- Designed and deployed containerized applications using Docker, orchestrated by Kubernetes. Implemented advanced Kubernetes features like Horizontal Pod Autoscaling and Load Balancing to ensure optimal application performance and resource utilization.
- Designed and implemented Azure Active Directory solutions for seamless user authentication and authorization across various applications. Configured Single Sign-On (SSO) and Multi-Factor Authentication (MFA) to enhance security while maintaining user convenience.
- Spearheaded the adoption of DevOps practices across multiple teams, facilitating collaboration and streamlining the software delivery process. Automated SDLC processes using YAML files, Ansible playbooks, and CI/CD pipelines, resulting in reduced manual interventions and faster releases.
- Implemented CHEF for configuration management, ensuring consistent application and infrastructure configurations across diverse environments. Orchestrated provisioning, deployment, and updates of applications and services using CHEF recipes and cookbooks.
- Managed SAP systems, optimizing performance, and ensuring high availability through proactive monitoring and fine-tuning. Implemented backups, disaster recovery plans, and performance tuning strategies to maintain stable SAP landscapes.
- Designed and deployed network security solutions using Palo Alto firewalls to protect against advanced threats and ensure secure data transmission.
- Configured security policies, intrusion prevention systems, and VPN tunnels to safeguard network communications.
- Led the migration of a legacy Java application from an older version of Java to a more recent one, ensuring compatibility and functionality. Performed thorough testing and validation to ensure the application operated as expected in the new environment.

Experience

ORGANIZATION	Syrocon, Germany August 2024 TO PRESENT WWW.syrocon.COM
DESIGNATION	Sr DevOps Engineer
JOB DESCRIPTION	Sr DevOps Engineer at Syrocon, responsible for architecting and maintaining Azure infrastructure. Configured and managed Entra ID, Azure AD, and implemented secure SSO solutions. Automated infrastructure provisioning using Terraform following IaC best practices. Designed and maintained GitLab CI/CD pipelines for scalable microservice deployments. Implemented monitoring, alerting, and system health checks across distributed environments. Ensured compliance, security hardening, and operational excellence across cloud resources:

ORGANIZATION	SeethruTec, PAKISTAN JUNE 2022 TO AGUST 2024 WWW.SEETHRUTEC.COM
DESIGNATION	Sr DevOps Engineer
JOB DESCRIPTION	In my current role, I manage AWS and Microsoft platforms, overseeing client-specific servers and applications. I lead Jenkins CI/CD pipelines for automated deployment on remote servers, eliminating manual tasks and ensuring seamless releases. With a focus on Azure Kubernetes, I architect scalable solutions and monitor applications through ELK stack and Grafana, swiftly identifying performance issues. I enhance security through Cloudflare DNS and implement Nginx and Zull proxy for secure data transmission, fortifying our infrastructure against emerging threats.

ORGANIZATION	Arcana Info PAKISTAN April 2021 TO JUNE 2022 WWW.ARCANAINFO.COM
DESIGNATION	DevOps Engineer
JOB DESCRIPTION	At Mobilink/Jazz Data Center, I managed finance app deployments using Jenkins and CHEF for configuration. Monitoring utilized HUAWEI web tools for real-time insights. I integrated F5 load balancer for enhanced security, deploying Ubuntu servers as efficient containers. I oversaw Java and Node.js app deployments via Bitbucket pipelines. Also, orchestrated on-premises data center migration to AWS for seamless, scalable infrastructure transition.

ORGANIZATION	MEDINA DAIRY PAKISTAN JAN 2019 TO APRIL 2021 WWW.MEDINADAIRY.CO.UK
DESIGNATION	DevOps Engineer
JOB DESCRIPTION	Proficient in SAP B1 and HANA admin, encompassing user management, authorization, and forms. I am skilled in server installation, maintenance, troubleshooting, and clustering. Windows Server expertise including AD, GPOs, user/group management across 20 sites. Effective Citrix supports XEN APP environment, addressing performance, printing, and networking. Managed Cisco/Huawei routers/switches. Office 365 proficiency: group management, shared mailboxes, licensing. Implemented DARK TRACE & BITDEFENDER for robust security. Hyper-V cluster configuration. Monitored

Certifications & Trainings

- Amazon Solution Architect Certified (Amazon web Services)

- Microsoft Certified Systems Engineer (Training from CISCOM Pakistan)
- Azure Kubernetes Service Certified AKS (Udemy)
- Microsoft Certified – Azure Fundamentals (Udemy)
- Huawei Certified ICT Professional (Certified from Huawei)

Career Achievements

- Got 3 Performance Excellence Awards, 1 Team Performance Excellence Award, 1 Green Slip from seethrutech Technologies.
- Got Team Performance Excellence award from Medina Dairy
- Got Performance Excellence Award from Arcana Info

Education

MSC -IT - SUPERIOR University Lahore, Pakistan

Completed: 2019

Hobbies/Interests

Traveling, Computer Games, Gardening and Piano playing

Personal Details

Nationality Pakistani

Marital Status Married

Languages: **English** (Advanced), Highly motivated to learn German.

Availability ASAP
